Summary

As a freelance Full-Stack & Mobile Software Engineer, I design and build scalable web platforms and native apps for B2B clients. I take full technical ownership of complex IT projects from initial architecture to final deployment. My core focus is solving real business problems through clean system architecture, robust engineering, and seamless integration of third-party enterprise hardware. I value a highly structured, autonomous approach and crystal-clear communication with stakeholders.

Core Tech Stack

Experience

Freelance Software Engineer / Full-Stack Developer

WebDev Ross | April 2024 – Present

Acting as a technical partner for B2B clients, delivering robust web platforms and custom integrations.

Selected Client Project: Mediacrowd (SaaS Platform Development)

- Engineered a custom booking platform (Symfony 7, Nuxt) to replace a legacy provider, independently driving complex system components toward go-live.
- Architected critical API integrations, implementing Stripe for payment workflows and selecting dormakaba hardware for automated digital facility access.
- Streamlined business operations by building an internal EasyAdmin dashboard.

Selected Client Project: Dein Schrauberplatz (Web & Infrastructure Management)

- Managed the corporate WordPress network, orchestrating the rollout of new location pages and ongoing SEO optimizations.
- Maintained the central tool database and developed an automated Python web scraper for seamless inventory synchronization.

Education

Master of Science, Computer Science

University of Bremen | Completed: July 2026

- Focus: Software Engineering
- Thesis: Performance Analysis of modern HTTP Protocols for Event-Bases Web Communication

Master of Science - Computer Science (Erasmus)

Instituto Superior Técnico (Lisbon)
Sep 2023 – Sep 2024

Bachelor of Science, Computer Science

University of Bremen | Completed
